Reality Check: If you have had an opportunity to compare Sherman & Reilly's Cablejet Systems to other "cable blowing" equipment on the market, then you already know the differences. Superjet™ smaller in size and a fraction of the weight, offers more flexibility in the underground environment and does not put pulling tension on the cable. This results in longer cable installations in erratic trajectories

and leaves the installed cable relaxed in the duct. No other installation system can make these claims. So, when you are ready to get into the cable blowing business, do yourself a favor - do a reality check and compare. You really do get what you pay for! And if you have any doubts - ask any of the Superjet™ users if they would use anything else. Reality is there are more Cablejet Systems users worldwide than all the others combined. So, if you would like to install 20,000 ft. - 60,000 ft. of cable per day - call us - It's a Reality! Accept no substitutes - Insist on the original. To learn more call 1-800-251-7780 or visit www.sherman-reilly.com

It's Reality.
