

MICROJET ULTIMAZ SYSTEM

Fiber Drop
Placing System

Footage Counter/
Speed Indicator
Included

* Drill is
Customer
Supplied.

MICROJET ULTIMAZ (Patent Pending)

The MicroJet **ULTIMAZ** is the smallest MicroJet model designed specifically for installing Fiber-To-The-Premise (FTTP) and in particular MDUs. **ULTIMAZ** is dedicated to specific microduct and microcable sizes for the customer. Its' modular design does however allow for additional pushers or blow heads to be incorporated into the unit for other cable installation purposes as well, such as for flat drop cables.

ULTIMAZ has a bi-directional drive system, features a single cable/duct insert for ease of operation and includes a torque limiting device for protecting your specific cable type. It also has a footage counter and air pressure gauge to monitor air pressure during cable placing. The drive system is powered by a cordless drill (not included). **ULTIMAZ** is ideal for Multiple Dwelling Units (MDUs) where cable routes are short but tortuous. Typical speeds are between 100 -300 FPM.

ADVANTAGES:

- Lightweight and portable (may be handheld)
- User friendly operation
- Fast installations in MDU trajectories
- Torque Limiter for fiber cable protection
- Inside or Outside plant use
- Low compressed air requirements (small compressors or nitrogen bottles)

GENERAL SPECIFICATIONS:

- Bare Weight: 3.7lb.
- Maximum Push Force: 7N/ 1.57lb.
- Maximum Radial Pressure: Automatic (Pre-set to your cable)
- Torque Limiter: Automatic (Pre-set to your cable)
- Vinyl Carry Case: Included
- Maximum Air Pressure: 12 bar (150 psi)
- Air Flow Rate: 0-50 CFM (depending upon duct size)
