## Helicopter Bundle Block

### S&R Model No. HWA-70

U.S. Patent No. 3,905,581  
Canada Patent No. 1,019,315  
Mexico Patent No. 139,000

You Can Convert  
Your Bundle Blocks  
With The "Wheel"

Ideal for stringing multiple conductors with a single pulling line, the S&R Wheel assembly allows the helicopter line to enter the bundle block from either side. The load is evenly distributed on both sides of the block at all times.

No latches to open or gates to shut and lock, the "Wheel" can be adapted to other types of Bundle Blocks, both fixed frame as well as Multiversal. Wheel assembly can easily be turned around to string in opposite direction.

Guards position the pulling line in the center sheave and keep it there until the running board passes through.

U.S. Patent Nos. 3,720,399; 3,844,536  
Canada Patent No. 987,657  
Mexico Patent No. 137,334

Model No. HE-7100

U.S. Patent No. 3,195,862  
Canada Patent No. 753,527  
Mexico Patent No. 83,240

A practical design for stringing over the crossarm with helicopters, eliminating the need for a lineman on the structure. The “outriggers” are spring steel coated with hi-visibility paint and guide the conductor through the trap door and into the sheave groove. Block can be set vertical,  $22\frac{1}{2}^\circ$ , or  $45^\circ$  for angles.

### S&R Model No. 7212-H

The Sherman & Reilly Single Multiversal Block is shown with the helicopter “outrigger arm” attachment. This block also features the double uplift rollers and hold-down attachment that are available. This basic block is the same as would be used for normal single conductor stringing, or combined with sheaves or drums for bundle conductor stringing.

Sheave available with Neoprene or Urethane lining.
